

# @riadne's thread

## The project

The aim of this project is the realization of a **computer course** for the Comunità Terapeutica Teseo, a **drug rehabilitation centre** in Coversano (Bari). A **training course** to learn how to use IT resources has been introduced among the weekly activities of the centre and a few **volunteers** of ISF-Puglia have set up a **lab** with a network of 7 PCs connected to the internet.

This course, started in **March 2009**, is a one-year course held on Saturdays by a group of volunteers who work together with the guests of the centre.

The volunteers teach the guests how to use the **internet**, word-processing **applications**, email programs, **social networks**, games and other software.

This course also involves a few **computer graphics** teaching modules for the creation of leaflets and brochures, and some training on the fundamentals of **Joomla** so as to enable the guests to update themselves the centre's website.

A course preparing for the first level of the **ECDL exam** has been organized - it is particularly successful and it is followed by a lot of people in the centre.
