

Fujitsu Siemens Computers supports social IT projects of the ISF in the Third World.

Our company started working with ISF in 2007, providing 30 notebooks for the computer room of a children's hospital in Brescia, Lombardy. Most of the young patients there are suffering from cancer or blood diseases and have to spend a lot of time in the hospital. Work on the new IT infrastructure is nearly finished and will enable the children to play, communicate with family and friends, and even study.

RESPONSIBILITY

Reducing the digital divide

Fujitsu Siemens Computers Italy and the Italian charity "Informatici Senza Frontiere" (ISF) have joined forces to help underprivileged people use and benefit from the advantages of modern information technology. Founded by a group of IT experts, ISF runs a number of projects in Italy as well as in Third World countries.

"We believe deeply in the partnership with 'Informatici Senza Frontiere' because we are convinced that technology can contribute to improving the lives of the disadvantaged or poorly," said Giuseppe Magni, Marketing Director Italy. "Therefore, we have decided to support the hospital in Brescia, which will only be the first of a series of such projects."

A number of additional joint projects with ISF are already in the pipeline. One of them will involve channel partners, thereby broadening the scope of objectives that can be achieved.
